

I support fully the well founded Comment submitted by The American Radio Relay League concerning Docket ET 03-104. Interference to radio communications between 2 mhz and 80 mhz would be severely disrupted if this proposal is approved. The plan needs more study to determine how interference to existing radio communications in the United States can be avoided if this service is approved. HF broadcasters, the military, police, fire, utility and the amateur radio services would be severely impacted by this plan as presently drafted.
